

Vuro Fleet Management System

Key Differentiators

Boost Your Fleet Performance With **VuroAI**

Best In Class Live Video

VuroCam continuously records video from two HD cameras, each with a 145° wide-angle lens, while using AI to process the video and upload to the **Vuro Fleet Telematics System (FTS)** when an alert is generated.

Fleet Management

Vuro FTS provides an overview of driver performance and vehicle operation, facilitates vehicle tracking, feeds route optimization efforts, enhances driver training, and assists preventative maintenance initiatives.

Exceptional Support

Personal training and installation & operations support by our experienced team ensures your fleet receives the best service to keep you up and running.

Powerful Processing

Via state-of-the-art AI powered 8-core processor, **VuroCam** identifies distracted driving behaviors and harsh vehicle events, verifies registered drivers via facial recognition, and delivers mobile-to-cloud communications.

Full Telematics Insights

Vuro Telematics gives you unique insight to keep your fleet operations productive & profitable. Vehicle health, route optimization, improved driver safety, asset location and fleet utilization are a few of the benefits.

Automated OTA Updates

The **VuroCam** gets over-the-air (OTA) updates automatically via its built-in 4G cellular communications, ensuring you have the latest and best operational firmware.

Improve Driver Safety

Drivers get an in-cab alert notification for which they can take action, such as a distracted driver alert. A video clip is automatically uploaded and can later be reviewed with a driving coach with the goal to improve driving behavior.

Easy Installation

Each **VuroCam** can be installed within 15 min typically. It quickly pairs to the accessory OBDII port reader and Driver Event-trigger Button. The **Vuro** Installation App aids in camera aiming and registration to the **VuroCloud**.

Future Proof

VuroCam adapts to fleet needs. New software features are added via automated OTA updates without the need to replace hardware. **Vuro FTS**, being cloud-based, also gets new features updated automatically.
